

Morris ALS/MND Principles **Accountability**

The Morris ALS/MND Principles were developed by those most impacted by ALS as a social contract for the community to follow so we can drive a path forward. They show how each of us can do better so treatments and cures are a reality and not an empty promise.

Scientific & Research Entity

Provide virtual and in-person access to all ALS/MND conferences and scientific meetings for people living with ALS.

Share your data, designs, failures, and best practices. Your duplication of work is deadly.

Build Expanded Access Programs (EAPs) into drug development plans. EAPs for other diseases were key routes to extend experimental therapies to those not eligible for trials and to learn more about the therapies and the disease. Sponsors must design trials that adhere to the Patient-Centric Trial Design (PaCTD) rating criteria.

Include people living with ALS on all clinical trial protocol teams, on advisory bodies to the National Institutes of Health, the Food & Drug Administration, Centers for Disease Control & Prevention.
